

## **PRESS RELEASE - 22 May 2015**

### **Snowy Hydro to trial the IntaCept® Tag Solution**

IntaCept Ltd is pleased to announce that Snowy Hydro has agreed to support a trial and implementation of IntaCept's innovative electrical equipment safety and compliance monitoring system (the IntaCept® Tag) into its workplace. The trial will include implementing up to 50 IntaCept® Tags into a regional workshop area within an electrical power station.

Lachlan Maclean, CEO of IntaCept Limited, is delighted that recent discussions with Snowy Hydro have resulted in this commitment. "We believe that the IntaCept® Tag will play an important role in furthering Snowy Hydro's commitment to providing a safe and modern working environment for all of its employees," he said

"The system has the ability to streamline and create efficiencies in electrical equipment safety and monitoring for Snowy Hydro and any other companies working in hazardous environments."

Ken Lister, Snowy Hydro's Chief Operating Officer says "We are required to monitor and ensure our electrical equipment is safe to operate in accordance with WHS legislation AS/NZS 3760:2101 (the In-Service Inspection and Testing of Electrical Equipment). We are delighted to be working with IntaCept in the trial of its new IntaCept® Tag.

We also envisage that IntaCept's Software as a Service (SaaS) solution for data capture and compliance management will have added benefits for our asset management.

Smartphone connected technologies have a growing influence in our business and we are delighted at being given this opportunity to work with IntaCept Ltd prior to the commercial introduction of the IntaCept® Tag solution for companies in our industry."

### **Background**

**IntaCept Ltd** was founded in 2007 and is based in Cooma NSW. Founder John Vanderhout has over 30 years' experience as electrician and saw a need for a robust integrated digital test and tagging device, now known as the IntaCept Tag®, to improve

the old paper-based tagging system. Over the last 2 years the company has been developing a prototype electrical product with an embedded testing & tagging device (the IntaCept® Tag). The IntaCept® Tag, which is protected by Australian and international patents, will improve compliance and reduce labour costs in companies which are required to test their portable electronic equipment under existing worker health and safety laws. IntaCept aims to roll out the IntaCept® Tag within Australian and international markets.

**Snowy Hydro Limited** is one of the National Electricity Markets largest generators by capacity. It provides energy to the National Electricity Market from its portfolio of generation plant which includes the Snowy Mountains Scheme's renewable, hydro generating units with a combined generating capacity of 3950 megawatts (MW) and its gas fired generating portfolio of 620MW in Victoria. In addition, it owns Red Energy, an electricity and gas retailer operating in Victoria, South Australia and New South Wales, and has recently acquired another electricity and gas retailer, Lumo Energy. Its operations include critical infrastructure within the heavy industrial sector.
